"body": "[12/03/2021 11:01:08 PM] <best> sorry for taking so long to answer, I had to step back abruptly\n\nat the moment I'm following the html and internal components\nI also pass bots for the guys to work (but I think I'll ask another person to do this so that everything is faster)\n\nLet's think about the html:\nIn fact, I always update 2 parts - the html land (there is a link protection inside the land) and appx files (on these files and specify the html land)\nappx files I put on azure and sometimes the shirts delete the server on azure (when analysts complain) and therefore I have to update the html land itself\n\nto do everything correctly, ideally I would only update appx files without touching the html landing\nfor example, you can make it in the landing so that when it is opened, a request is sent to some server, from there a response is given with a link

to appx files and they were substituted into the button on the landing\nthen it will be possible to dynamically change the appx files of the host without even changing the html of the landing\n[03.12.2021 23:01:45]\n<best> either work as it is now, when Mikes delete the azura server, I update the html land and update the appx files and then send you the html land, and you already change it and everything starts"
